

Senior Scientist: Gene Therapy and RNA Therapeutics

Transine Therapeutics is seeking to recruit an enthusiastic and talented, senior molecular cell biologist to join our expanding laboratory team at the Babraham Research Campus in Cambridge, one of the UK's leading biotech hubs. Transine is developing a novel class of therapeutic RNAs that have the property to upregulate protein expression with an unprecedented level of control and specificity: the SINEUPs®. The SINEUP® proprietary technology massively extends the druggable proteome and represents an entirely unique mechanism of action for currently hard-to-treat disease.

The individual recruited into this position will play a crucial role in the progression of key pipeline programmes for the treatment of disease with high unmet medical need.

Candidates must be highly collaborative, technically-skilled and motivated, demonstrating a proven track record in the rapid delivery and analysis of robust data sets within a dynamic and fast-moving environment.

Key Areas of Responsibility

- To implement high quality laboratory-based activities, as directed by the Research Director; such as the testing of gene therapy candidates using cell-based assays, western blotting and qPCR.
- Execute high quality work, demonstrating an excellent attention-to-detail and appreciation of the broad Company research goals.
- Work to clear and tight timelines and disseminate data and updates *via* excellent written and verbal communication in internal meetings, working in a highly collaborative environment with colleagues both within, and external to, the Transine team.

Essential Skills and Qualifications

The ideal candidate for this role will have:

- A PhD in the biological sciences.
- A minimum of 3-5 years significant hands-on laboratory experience, ideally working for at least part of this time in a pharmaceutical or biotech lab setting.
- A strong background in essential cell biology, molecular biology and biochemical techniques, including but not limited to: cell culture, transfection, western blotting, quantitative PCR, fluorescent and luminescent cell-based assays.
- An understanding of experimental design, statistical analysis and data interpretation.
- An evidenced track record of delivering high quality data to tight timelines.
- Accurate and timely data recording, analysis, report writing and lab book maintenance skills.
- Excellent attention-to-detail in experimental work and laboratory management standards.

- The ability to work independently in the laboratory, following detailed instructions where necessary but providing own intellectual input and advice as appropriate. Flexible attitude in regard to changing priorities.
- An understanding of the drug discovery process, and an appreciation of the key requirements for working in a biotech start-up.

Benefits:

- Competitive remuneration including eligibility for annual bonus.
- Eligibility for share options.
- Attractive relocation packages.
- Health insurance plan for employee, partner and dependents.
- Death in service insurance.
- 28 days holiday.
- Company pension with generous company contributions.
- Located on the beautiful Babraham science park south of Cambridge with extensive amenities including gym.

Should you wish to be considered for this position, please send a CV and covering letter to recruitment@transinetx.com by 31st January 2022.
